

Hunter™

Know what adversaries know about you.
Then make the information obsolete.

Hunter™ provides analysts with an efficient workspace to search for, identify and visualize intelligence from multiple sources

From phishing attacks and ransomware, to insider attacks or account takeover, organizations and individuals face a range of cyber threats on a daily basis.

Cybercriminals operate with a level of anonymity, using underground forums, aliases and cryptocurrency to obfuscate their activities and their identities. This makes the job of the intelligence analyst increasingly difficult, requiring innovative methods of data scouring and collection to uncover intelligence that will move an investigation forward or disrupt an adversary.

Hunter™ is an intuitive investigations platform designed to improve and simplify the job of an Intelligence Analyst, and:

- bring together data from a range of complimentary sources
- provide control of their investigation
- enable the visualization of intelligence in a graphical format).

Range of sources

Hunter™ makes use of data from multiple sources which complement each other, enabling you to more easily find intelligence of relevance to your investigation. Using the Constella data lake you will have access to over 25 Billion breach records as well as search engines, social media, Passive DNS, Pastebins and Dark web data.

Search and Results

Using a simple and intuitive search bar you can search for over 30 different attributes and keywords across multiple sources either individually or one at a time to focus your search.

- Link data from different sources and easily move between them
- Search the Constella data lake to access over 25 billion breach records as well as search engines, social media, Passive DNS, Pastebins and dark web data
- Conduct a bulk search, identify related searches, view your search history and investigate domain exposure

Results will be provided by source with the option to 'pivot' on them and investigate in more detail, such as identifying accounts using the same password and searching for social media profiles.

Visualizations

Using the graph workspace you can visualize intelligence you have identified from within the platform. Easily add information to the graph, change the shape, view metadata and control how your investigation is viewed.

The graph is fully controlled by the analyst, so you can add, delete, move nodes, as well as change the size of the screen for a more focused view of the graph.

Investigation Management

The Hunter™ investigations platform expedites conducting multiple investigations simultaneously, enables users to reference historic investigations, and mitigates loss of data, and collaborating with colleagues.

- Create as many investigations as you need, providing a description, and a date stamp, or delete investigations as needed
- Share investigations with your colleagues to work collaboratively, with 'read only' or 'full access'
- Create notes and graphs for your investigation, which are automatically updated with data on who last modified the content

Other Capabilities: Targets, Saved Data, Record Navigation, Tasks

About Constella

Constella is an identity intelligence and attribution analysis company empowering intel analysts, security researchers, criminal investigators and identity protection providers with capabilities to unmask adversaries and prevent fraud, identity theft, account takeover, and cyber espionage. The Constella team is comprised of intelligence community analysts, infosec pioneers and tech entrepreneurs with a single mission: to disrupt cyber-enabled crime at the source - the people behind the attacks.

Constella continuously validates then archives identity records collected from data breaches and leaks exposed in the deep and dark web into the Constella data lake.

It powers Constella Hunter™ - an identity intelligence and attribution analysis platform - used by anti-money laundering, fraud and financial crime intel units, and advanced security operations centers. Constella data lake also fuels Constella Intelligence API™ - a dark web monitoring solution - used by some of the largest identity theft protection service providers, security vendors, and enterprises to alert millions of consumers of exposed personal information.

The Constella team is comprised of intelligence community analysts, InfoSec pioneers and tech entrepreneurs with a single mission: to disrupt cyber-enabled crime at the source - the people behind the attacks.
